PROFILE

As a Data Scientist with five years of professional experience, I have delivered sustainable AI products through data science, statistical analysis, lifecycle management, MLOps implementation, and agile collaboration. My expertise spans in insurance, apparel, image analysis, generative ai and data science architectures, positioning me to successfully execute impactful projects with clarity and accountability.

PROFESSIONAL EXPERIENCE

Senior Data Scientist, ADN DigiNet

- Built scoring models for Metlife to prioritize potential clients and rank insurance agents, functioning as a risk and propensity scorecard for decision-makers.
- Analyzed behavioral and transactional data to build a recommendation engine (collaborative filtering) that informs product decisions

2026-06 – Present
Dhaka, Bangladesh

Data Scientist, Gildan

- Design and apply statistical analysis, hypothesis testing to evaluate busniness initiatives, build AI solutions for stakeholders to enhance clothing manufacturing decision.
- Improve AI architecture for Azure and on-premise environments with validations, CI/CD, microservices, unit testing, model versioning, code coverage, retraining and drift detection.
- Build AI Agents to automate finance and supply-chain queries using SQL & code execution for analytical reports generation optimizing stakeholders' decision.
- Build fabric quality prediction and machine downtime forecasting to optimize key decision.
- Maintain thorough documentation and define guidelines for AI frameworks, SQL, governance, observility, and guardrails.

2024-10 – 2026-05
Dhaka, Bangladesh

Machine Learning Engineer, Intermediate Data Systems

- Defined architecture and standards for agentic AI applications identifying automation opportunities, requirements, and solutions.
- Built agentic AI ecosystem (Llamaindex, FastAPI, Vector DB, Docker, MLflow, CI/CD, Guardrails) enabling autonomous, tool-using agents with governance and guardrails.
- Built an enterprise conversational AI agent for financial query resolution and insurance recommendation, combining RAG pipelines, prompt management, evaluation, and observability, directly applicable to agentic AI in underwriting and lending decisions.

2023-10 – 2024-06
Johannesburg, South Africa

Machine Learning Engineer, Spacenus GmbH (remote)

- Built ETL pipelines for satellite imagery and geospatial data to power statistical intelligence.
- Architected a scalable AWS crop detection service (SageMaker, Lambda, Step Functions, API Gateway, S3) using Sentinel-1 data to optimize harvest timing for farmers.
- Designed an unsupervised nitrogen recommendation system for agricultural farms using Sentinel-2 and Landsat-8 imagery to optimize fertilizer use.

2022-02 – 2023-09
Darmstadt, Germany

Freelance, Omdena

- Shipped landcover detection model using Unet segmentation model with sentinel-2 dataset and reached 85% mIoU over Australlia landscape.
- Build Soil Organic Carbon forecasting model using CNN-LSTM forecasting using multiple satellite dataset and indices.
- Intent Classification System on business communication service to segregate clients.

2021-03 – 2022-01
CA, USA

EDUCATION

MSc in CSE (Major in Data science), United International University

2024-01 – present
Dhaka, Bangladesh

Electrical and Electronics Engineering, Rajshahi University of Engineering and Technology

2015 – 2022
Rajshahi, Bangladesh

SKILLS

Programming Languages

Python, Javascript, C++, SQL, Linux Shell, Bash Script

Python Library

Llamaindex, Keras, Pytorch, Tensorflow, Scikit-learn, Langchain, Streamlit, FastApi, Flask, ruff, pytest

Cloud & Database

Azure, AWS, Postgres, MongoDB, MSSQL, Databricks, MySQL

Tools

Git, Jira, Confluence, Teams, Slack, Notion
